Black Cat by Moonlight

Why do cat eyes sometimes shine in the dark?

1 Plum
2 Sky
3 Butter
4 Rust
5 Ink blue
6 Ivory
7 Teal
8 Ash
9 Dusk

Did you know? Cats have a layer at the back of each eye that reflects light. It gives the eye another chance to catch a little light, helping the cat see when it's dim. Some of that reflected light can come back toward you and make the eyes look as if they glow.
