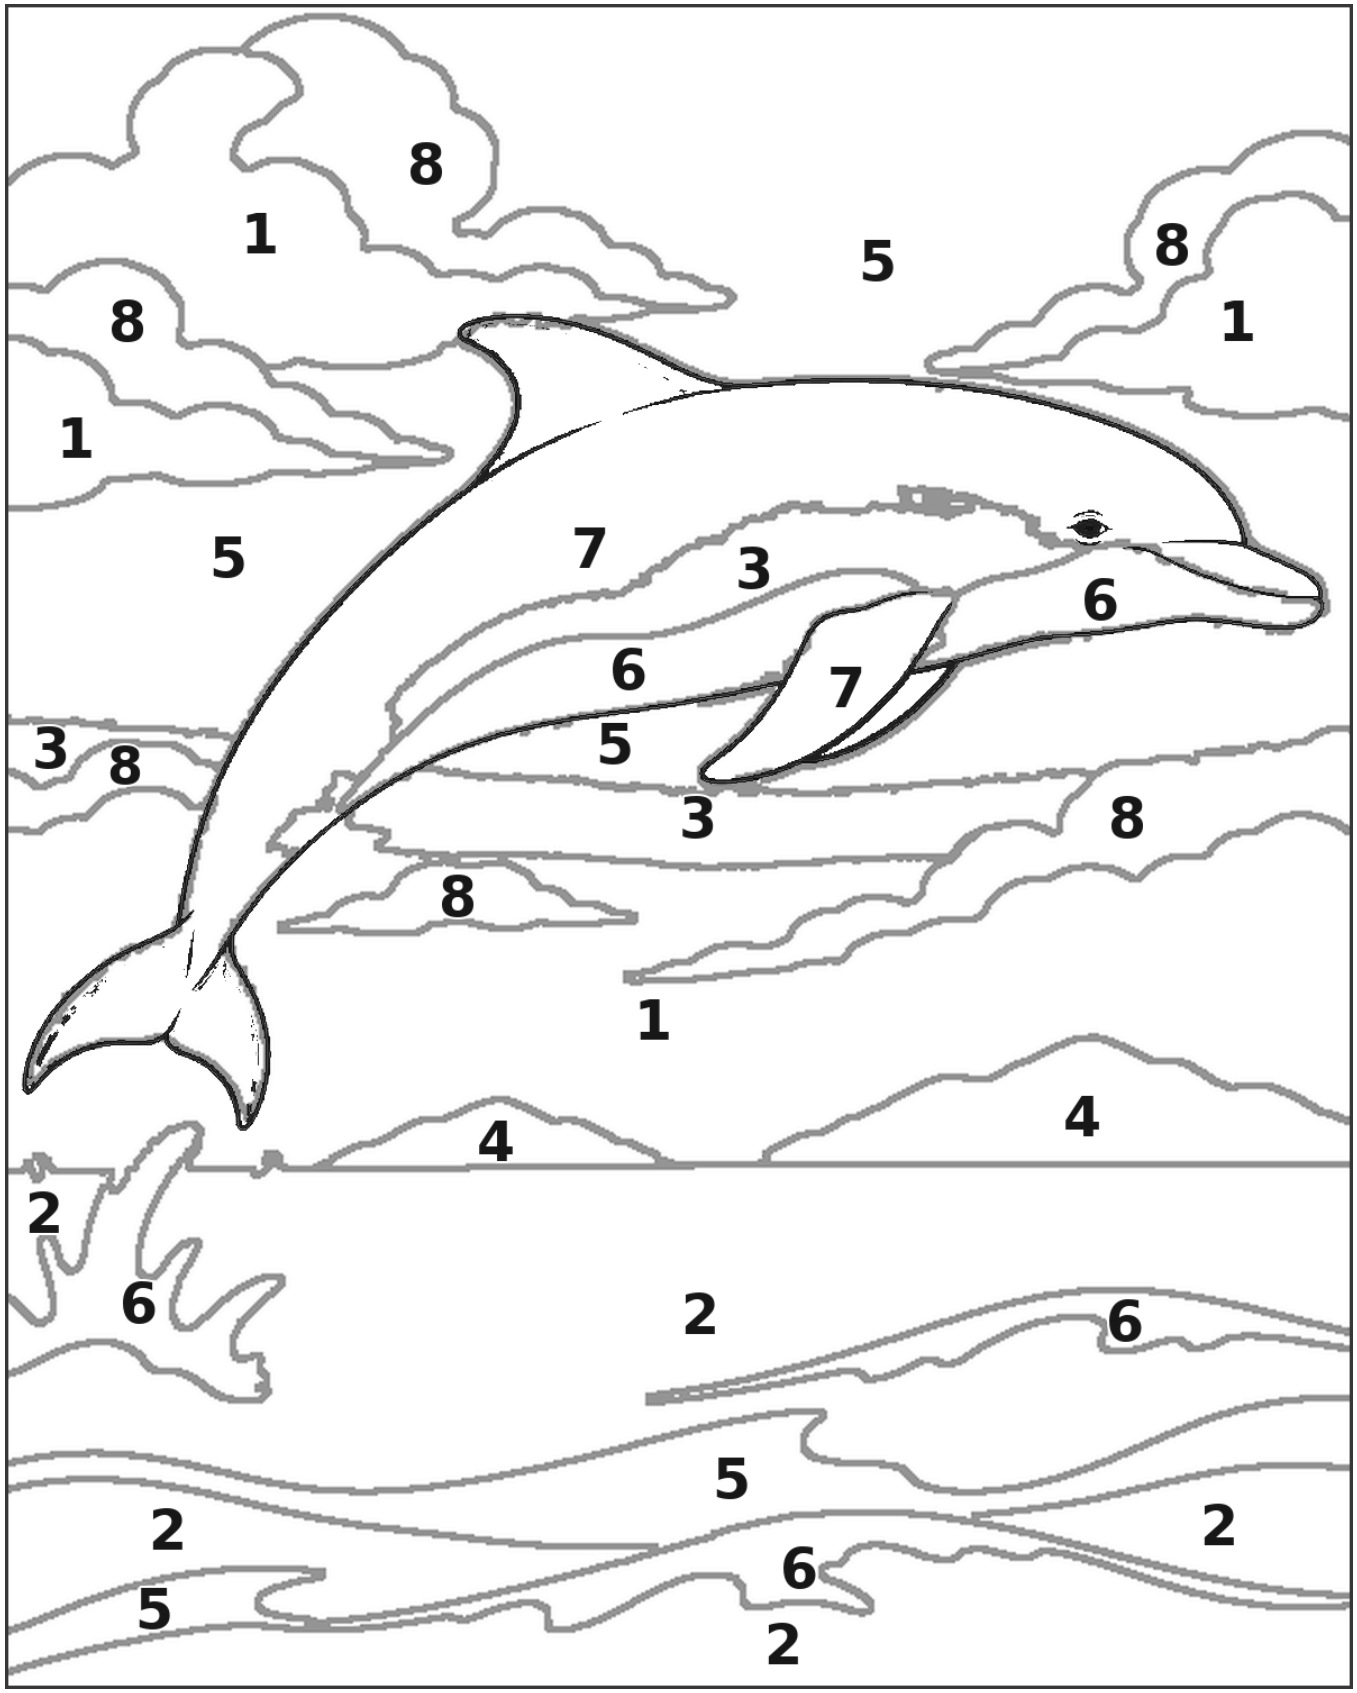
Bottlenose Dolphin

How can a dolphin find its way by sound?



1 Apricot
2 Denim
3 Mauve
4 Olive
5 Lagoon
6 Parchment
7 Ink blue
8 Peach

Did you know? A bottlenose dolphin sends out quick clicks and listens for their echoes. The echoes can tell it where an object or a fish is, even when the water is hard to see through. This is called echolocation.
