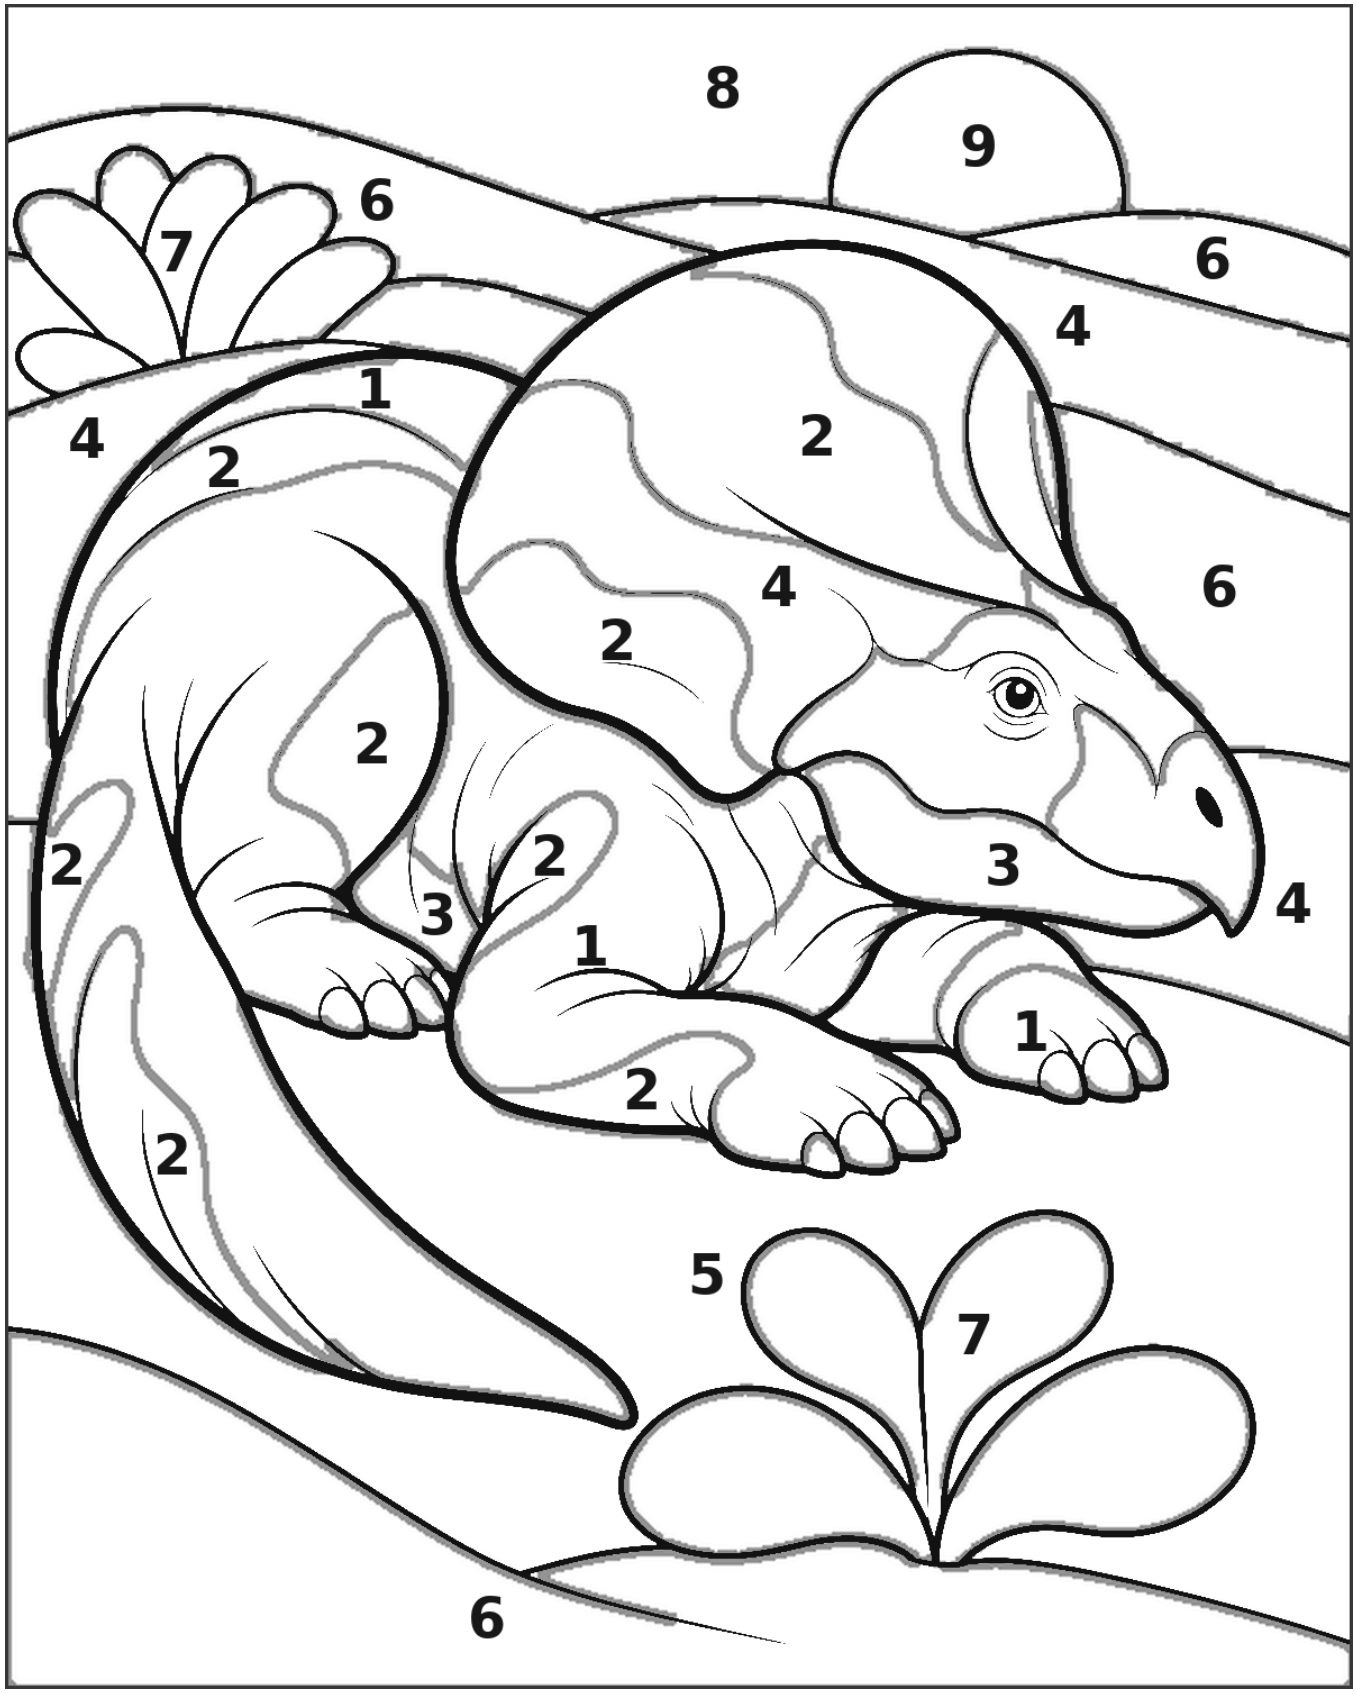
Protoceratops

Can you spot the beak and frill?



1 Apricot
2 Sienna
3 Cream
4 Amber
5 Mauve
6 Dusty rose
7 Sage green
8 Violet sky
9 Sun yellow

Did you know? Protoceratops had a hard beak for biting off food and a bony frill behind its head. This relative of the horned dinosaurs was much smaller than Triceratops. It lived in Late Cretaceous Asia, where it shared its habitat with Velociraptor.
