Styracosaurus

Where did Styracosaurus wear its biggest horn?

1 Slate violet	**2 Deep blue**	**3 Ivory**
4 Coral	**5 Berry**	**6 Fern green**
7 Ochre	**8 Sand**	**9 River blue**

Did you know? Look above the nose for one long horn. Then look behind the head for the bony frill with its ring of large spikes. This arrangement gives Styracosaurus a very different silhouette from Triceratops, which had two long horns above its eyes.
