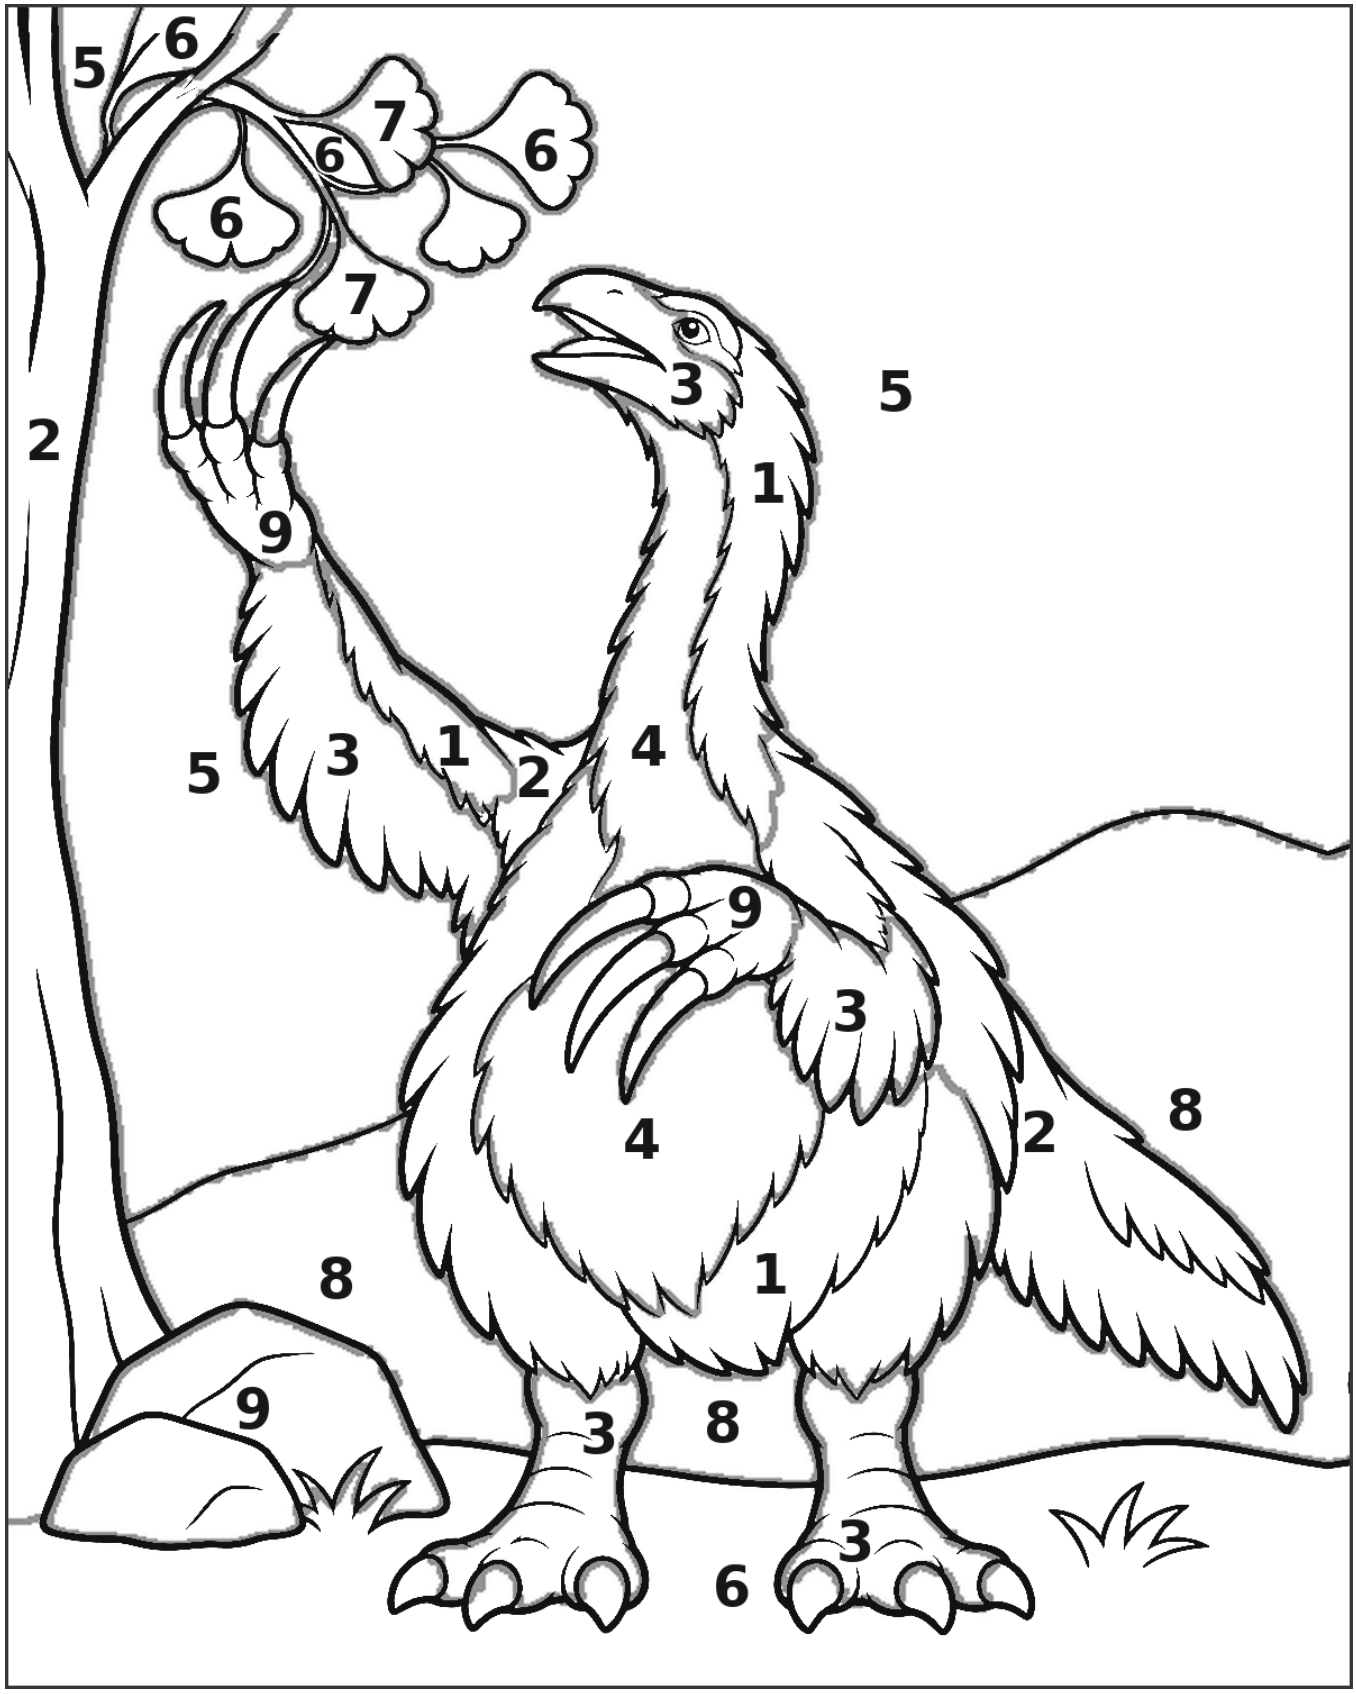
Therizinosaurus

Do huge claws always mean a dinosaur hunted?



1 Rust	**2 Auburn**	**3 Ochre**
4 Cream	**5 Peach**	**6 Moss**
7 Leaf green	**8 Violet**	**9 Stone gray**

Did you know? Therizinosaurus had extremely long hand claws, but it belonged to a group of dinosaurs whose small heads and teeth point to a plant diet. The claws are easy to spot in a fossil. What the animal did with them is harder to tell.
